

# ARMINATOR2

From Krakli Software

[www.krakli.com](http://www.krakli.com)

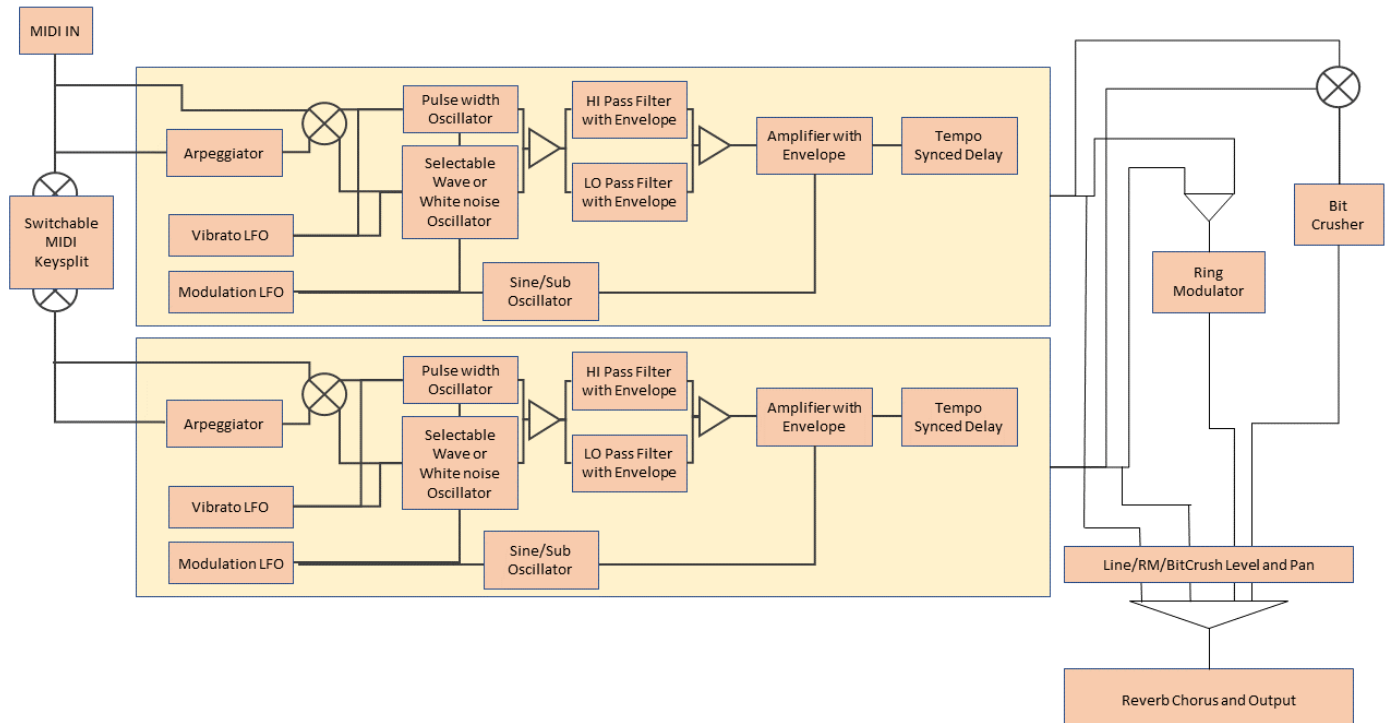

Arminator 2 is a vsti for 32bits Windows only.

It comes complete with 5 banks of 128 patches each and it is designed as a homage to the Yamaha CS80 although can not be considered to be a faithful emulation of that fantastic instrument but rather it's aim is to offer patches that hint at the original instruments power.

There was a version 1.5 of Arminator and patches created for that version will open in version2 although they may open with an error about one parameter missing. Hopefully the patch will still load after pressing OK on the message.

This manual is a quick guide to the various controls and features of Arminator 2

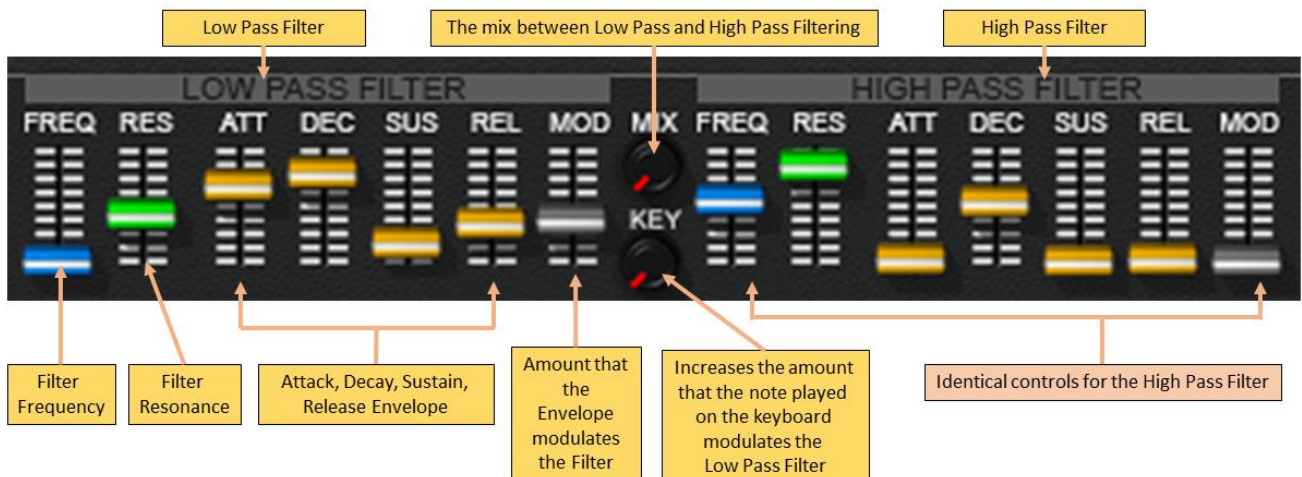

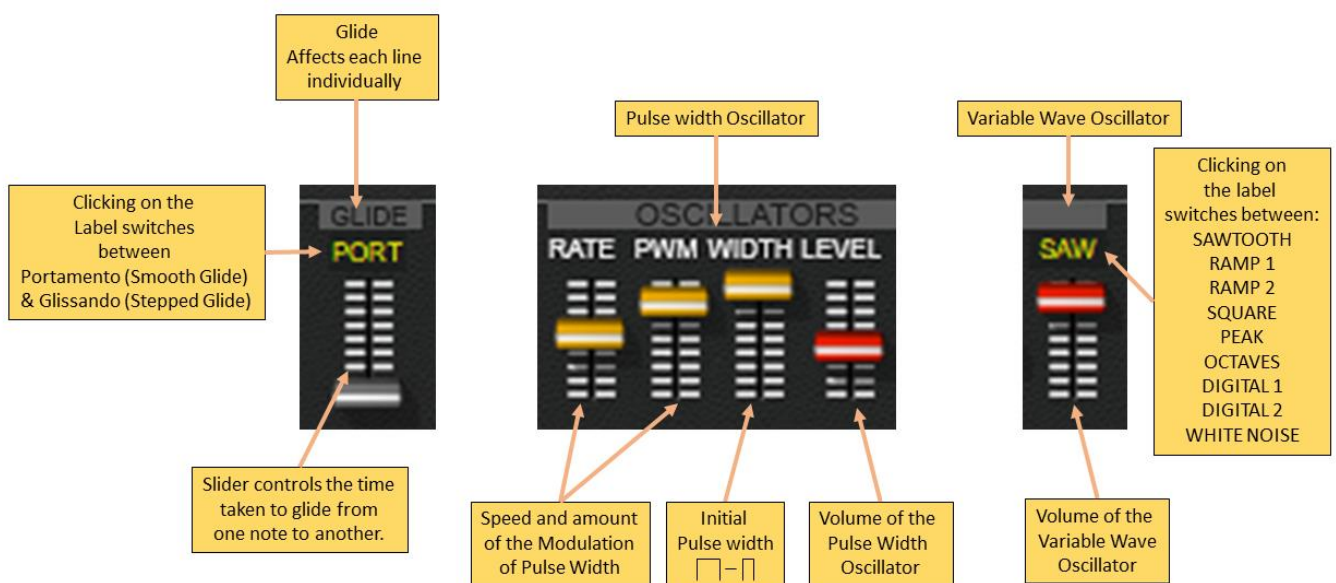

Schematic:

## The Top Section:

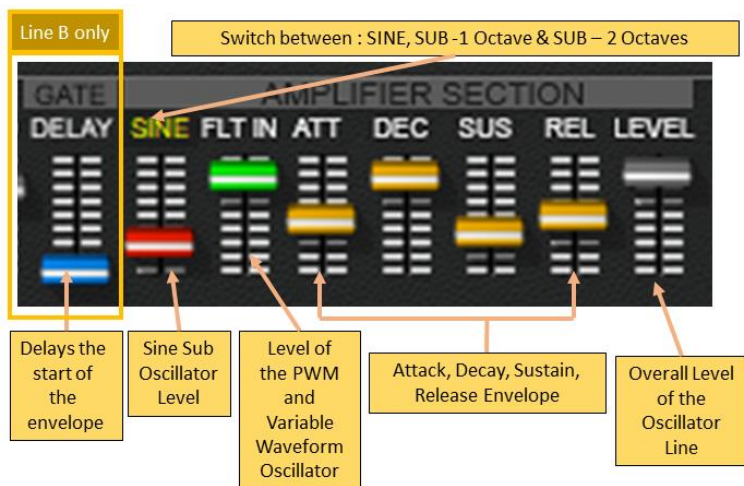

## The Oscillator Lines (A+ B)

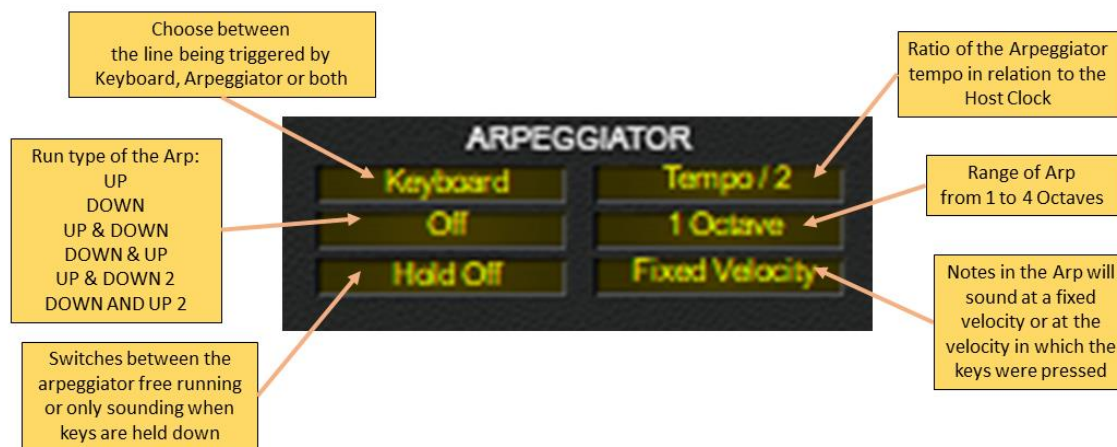

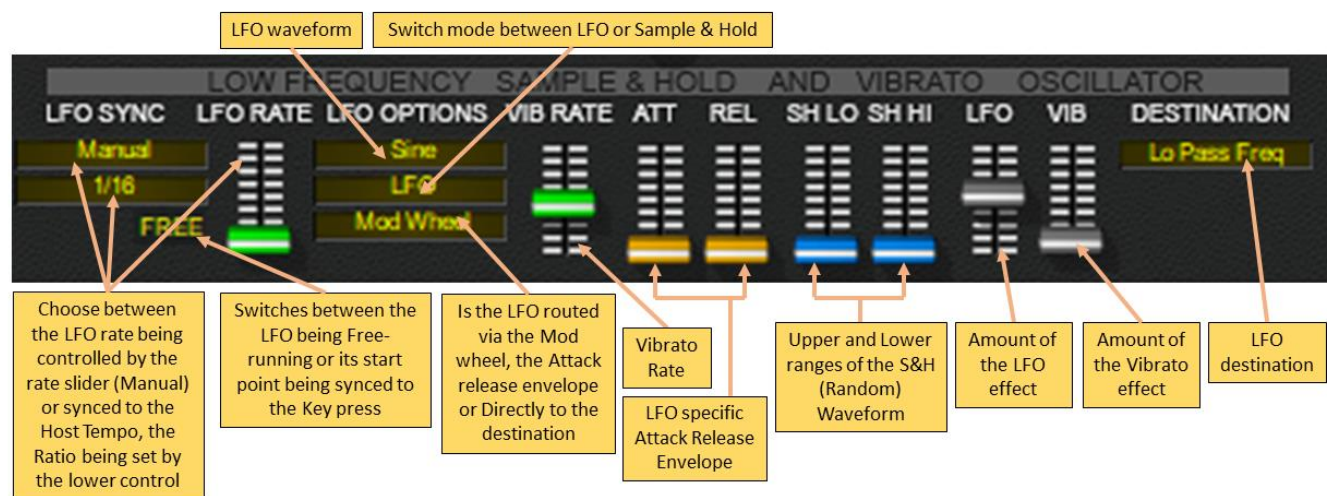

## The Oscillator Lines (A+ B) continued..

## Line's Arpeggiator
